Amendments to the Specification

Please replace the paragraph on page 7 lines 15-25 with the following amended paragraph:

The preferred configuration agent application 10 operates in the following manner. The first data structure [[32]] 28 stores a candidate list of resources identifiers 32 that represent resources that are supported by the wireless communications device 12. The user interface 14 is operable to permit a user to obtain a target list of candidate resource identifiers 32 from the first data structure [[26]] 28. The database manager application 24 is operable to retrieve a set of components [[28]] 34 that are associated with each targeted resource identifier 32 to generate a menu of components 34. The database manager application 24 is operable to access component data 36 associated with respective components 34 to facilitate the defining of a preferential configuration. The data processing system 16 cooperates with the user interface 14 to support the generation of an arrangement of resource identifiers 32 and components 34 in the form of a menu that supports, forms, or defines the preferential architecture scheme.

Please replace the paragraph on page 8 lines 15-19 with the following amended paragraph:

In the preferred embodiment, enterprise application resources 40 preferentially include one or more of the following resources: office-enablement application resources 46, standard business application resources 48, and custom business application resources 50. Office enablement application resources [[36]] 46 preferentially include an electronic-mail application resource and a scheduling application resource.
